# 1 Package pystroke

## 1.1 Modules

- **behaviour** (*Section 2, p. 5*)
- **behaviour\_engine** (*Section 3, p. 6*)
- **draw\_engine** (*Section 4, p. 7*)
- **event\_engine** (*Section 5, p. 13*)
- **game** (*Section 6, p. 19*)
- **game\_engine** (*Section 7, p. 20*)
- **hud** (*Section 8, p. 27*)
- **input\_engine** (*Section 9, p. 37*)
- **locals** (*Section 10, p. 44*)
- **vector2** (*Section 11, p. 45*)
- **vector2\_test** (*Section 12, p. 50*)
- **vex** (*Section 13, p. 64*)

## 1.2 Variables

Name	Description
<code>__package__</code>	<b>Value:</b> None

## 2 Module *pystroke.behaviour*

### 2.1 Variables

Name	Description
<code>__package__</code>	<b>Value:</b> 'pystroke'

### 2.2 Class Behaviour

Stores a modular behaviour that can be added to a game entity

**Author:** James Heslin (PROGRAM\_IX)

#### 2.2.1 Methods

<b><code>__init__(self, name)</code></b> <hr/> Creates a new Behaviour <b>Parameters</b> <b>name:</b> The name of the Behaviour ( <i>type=string</i> ) <b>Author:</b> James Heslin (PROGRAM_IX)
<b><code>process(self, entity)</code></b> <hr/> Performs the operations making up the Behaviour on the game entity <b>Parameters</b> <b>entity:</b> The game entity affected by the Behaviour ( <i>type=Vex</i> ) <b>Author:</b> James Heslin (PROGRAM_IX)

### 3 Module *pystroke.behaviour\_engine*

#### 3.1 Variables

Name	Description
<code>__package__</code>	<b>Value:</b> 'pystroke'

#### 3.2 Class *BehaviourEngine*

Processes all behaviours in `beh_dict` when `update()` is called

**Author:** James Heslin (PROGRAM\_IX)

##### 3.2.1 Methods

<code>__init__(self, beh_dict={})</code>
Construct a new <i>BehaviourEngine</i> with a list of Behaviours
<b>Parameters</b>
<code>beh_dict</code> : The list of Behaviours this <i>BehaviourEngine</i> will use ( <i>type=</i> <code>dict</code> ( <i>Behaviour</i> ))
<b>Author:</b> James Heslin (PROGRAM_IX)

<code>update(self)</code>
Process all behaviours in <code>beh_dict</code>
<b>Author:</b> James Heslin (PROGRAM_IX)

## 4 Module `pystroke.draw_engine`

### 4.1 Variables

Name	Description
ACTIVEEVENT	Value: 1
ANYFORMAT	Value: 268435456
ASYNCBLIT	Value: 4

## 4.2 Class DrawEngine

Abstracts the calls to Vex.draw() and other drawing methods

**Author:** James Heslin (PROGRAM\_IX)

### 4.2.1 Methods

<b>__init__</b> ( <i>self</i> , <i>screen</i> )
<b>draw</b> ( <i>self</i> , <i>drawables</i> ) <hr/> Presumes everything in the drawables list has a draw() method, and draws all of them to screen. <b>Parameters</b> <i>drawables</i> : The list of objects to draw (all must have a draw() method) <i>(type=list)</i> <b>Author:</b> James Heslin (PROGRAM_IX)
<b>begin_draw</b> ( <i>self</i> , <i>colour</i> ) <hr/> Clears the screen to prepare for drawing <b>Parameters</b> <i>colour</i> : The colour to fill the screen with <i>(type=pygame.Color)</i> <b>Author:</b> James Heslin (PROGRAM_IX)
<b>end_draw</b> ( <i>self</i> ) <hr/> Updates the screen after draws have finished <b>Author:</b> James Heslin (PROGRAM_IX)

## 5 Module `pystroke.event_engine`

### 5.1 Variables

## 5.2 Class EventEngine

Reads the event queue and passes events to other engines

**Author:** James Heslin (PROGRAM\_IX)

### 5.2.1 Methods

<b>__init__</b> ( <i>self</i> , <i>i_e</i> ) <hr/> Takes an InputEngine and passes all relevant events to it <b>Parameters</b> <i>i_e</i> : InputEngine to which input events should be passed ( <i>type=InputEngine</i> ) <b>Author:</b> James Heslin (PROGRAM_IX)
<b>update</b> ( <i>self</i> ) <hr/> Pulls all relevant events from the event queue and passes them to the appropriate engines <b>Author:</b> James Heslin (PROGRAM_IX)
<b>reset_input</b> ( <i>self</i> ) <hr/> Resets the InputEngine's values <b>Author:</b> James Heslin (PROGRAM_IX)
<b>print_input_states</b> ( <i>self</i> ) <hr/> Prints the states of the InputEngine <b>Author:</b> James Heslin (PROGRAM_IX)

## 6 Module `pystroke.game`

### 6.1 Functions

<b>main()</b>
Default running parameters for Game
<b>Author:</b> James Heslin (PROGRAM_IX)

### 6.2 Variables

Name	Description
<code>__package__</code>	<b>Value:</b> 'pystroke'

### 6.3 Class `Game`

Container and manager for `GameEngine` instances

**Author:** James Heslin (PROGRAM\_IX)

#### 6.3.1 Methods

<b>__init__</b> ( <i>self</i> , <i>width</i> , <i>height</i> )
Constructs a new <code>Game</code> , whose screen has the specified width and height
<b>Parameters</b>
<b>width:</b> Width of the screen ( <i>type=int</i> )
<b>height:</b> Height of the screen ( <i>type=int</i> )
<b>Author:</b> James Heslin (PROGRAM_IX)

<b>start</b> ( <i>self</i> )
Set up the <code>GameEngine</code> and run the game
<b>Author:</b> James Heslin (PROGRAM_IX)

<b>run</b> ( <i>self</i> )
Runs the <code>GameEngine</code> , switches to another <code>GameEngine</code> , or quits, based on returned flags from <code>GameEngine</code>
<b>Author:</b> James Heslin (PROGRAM_IX)

## 7.2 Class GameEngine

Generic class to contain all logic for the basic running of the game

**Author:** James Heslin (PROGRAM\_IX)

### 7.2.1 Methods

<b>__init__</b> ( <i>self</i> , <i>screen</i> , <i>event_e</i> =EventEngine(InputEngine()), <i>fps</i> =60)
Constructs a GameEngine
<b>Parameters</b>
<b>screen:</b> The screen on which the game will be rendered - this will be passed around to other classes ( <i>type</i> =pygame.Surface)
<b>event_e:</b> The EventEngine that this will use to read events ( <i>type</i> =EventEngine)
<b>fps:</b> The number of frames to display/ticks to pass every second ( <i>type</i> =int)
<b>Author:</b> James Heslin (PROGRAM_IX)

<b>update</b> ( <i>self</i> )
Performs per-frame logic
<b>Return Value</b>
Flag to tell Game what to do ( <i>type</i> =int)
<b>Author:</b> James Heslin (PROGRAM_IX)

**draw**(*self*)

Draws all necessary elements using the DrawEngine

**Author:** James Heslin (PROGRAM\_IX)**run**(*self*)

The main loop of the game

**Return Value**

Flag to tell Game what to do

*(type=int)***Author:** James Heslin (PROGRAM\_IX)**get\_key**(*self, key*)

Wraps the checking of key input

**Return Value**

The state of the key

*(type=boolean)*

## 8 Module `pystroke.hud`

## 8.2 Class HUDElement

**Known Subclasses:** pystroke.hud.HUDLine, pystroke.hud.HUDPolygon, pystroke.hud.HUDText

Generic part of a heads-up display

**Author:** James Heslin (PROGRAM\_IX)

### 8.2.1 Methods

<b>init__</b> ( <i>self</i> , <i>label</i> , <i>colour</i> , <i>visible</i> =True)
Constructs a new HUDElement
<b>Parameters</b>
<i>label</i> : Identifier of the element ( <i>type</i> =string)
<i>colour</i> : Colour of the element ( <i>type</i> =pygame.Colour)
<i>visible</i> : Whether the element is visible ( <i>type</i> =boolean)
<b>Author:</b> James Heslin (PROGRAM_IX)

<b>draw</b> ( <i>self</i> , <i>screen</i> )
Draw the element to the screen
<b>Parameters</b>
<i>screen</i> : The surface onto which the game will be rendered ( <i>type</i> =pygame.Surface)
<b>Author:</b> James Heslin (PROGRAM_IX)

### 8.3 Class HUDText

An element of a heads-up display consisting of text

**Author:** James Heslin (PROGRAM\_IX)

#### 8.3.1 Methods

<b>__init__</b> ( <i>self, label, colour, text, pos, size, width, visible=True</i> )
Constructs a new HUDElement
<b>Parameters</b>
<b>label:</b> Identifier of the text ( <i>type=string</i> )
<b>colour:</b> Colour of the text ( <i>type=pygame.Color</i> )
<b>text:</b> Text to display ( <i>type=string</i> )
<b>pos:</b> Coordinates of text start point ( <i>type=list/tuple containing two ints</i> )
<b>visible:</b> Whether the text is visible ( <i>type=boolean</i> )
Overrides: pystroke.hud.HUDElement.__init__
<b>Author:</b> James Heslin (PROGRAM_IX)

  

<b>draw</b> ( <i>self, screen</i> )
Render the text to the screen
<b>Parameters</b>
<b>screen:</b> The screen onto which the text should be rendered ( <i>type=pygame.Surface</i> )
Overrides: pystroke.hud.HUDElement.draw
<b>Author:</b> James Heslin (PROGRAM_IX)

#### 8.3.2 Class Variables

Name	Description
letters	<b>Value:</b> {'0': ((5, 15), (-5, -10), (-5, 15), (5, 15), (5, -10), (...)

## 8.4 Class HUDLine

An element of a heads-up display consisting of a line

**Author:** James Heslin (PROGRAM\_IX)

### 8.4.1 Methods

<b>__init__</b> ( <i>self</i> , <i>label</i> , <i>colour</i> , <i>line</i> , <i>visible</i> =True)
Constructs a new HUDLine
<b>Parameters</b>
<b>label:</b> Identifier of the line ( <i>type</i> =string)
<b>colour:</b> Colour of the line ( <i>type</i> =pygame.Color)
<b>line:</b> Line arguments ( <i>type</i> =list/tuple containing start position tuple (int, int), end position tuple (int, int), and width (int))
<b>visible:</b> Whether the line is visible ( <i>type</i> =boolean)
Overrides: pystroke.hud.HUDElement.__init__
<b>Author:</b> James Heslin (PROGRAM_IX)

<b>draw</b> ( <i>self</i> , <i>screen</i> )
Render the line to the screen
<b>Parameters</b>
<b>screen:</b> The screen onto which the line should be rendered ( <i>type</i> =pygame.Surface)
Overrides: pystroke.hud.HUDElement.draw
<b>Author:</b> James Heslin (PROGRAM_IX)

## 8.5 Class HUDPolygon

An element of a heads-up display consisting of a polygon

**Author:** James Heslin (PROGRAM\_IX)

### 8.5.1 Methods

<b>__init__</b> ( <i>self</i> , <i>label</i> , <i>colour</i> , <i>lines</i> , <i>visible</i> =True)
Constructs a new HUDElement
<b>Parameters</b>
<b>label</b> : Identifier of the polygon ( <i>type</i> =string)
<b>colour</b> : Colour of the polygon ( <i>type</i> =pygame.Colour)
<b>lines</b> : Lines portion of the element ( <i>type</i> =list/tuple containing a tuple of points (each (int, int)) and an int)
<b>visible</b> : Whether the element is visible ( <i>type</i> =boolean)
Overrides: pystroke.hud.HUDElement.__init__
<b>Author</b> : James Heslin (PROGRAM_IX)

<b>draw</b> ( <i>self</i> , <i>screen</i> )
Render the polygon to the screen
<b>Parameters</b>
<b>screen</b> : The screen onto which the polygon is to be rendered ( <i>type</i> =pygame.Surface)
Overrides: pystroke.hud.HUDElement.draw
<b>Author</b> : James Heslin (PROGRAM_IX)

## 8.6 Class HUD

A heads-up display, which comprises various visual elements displayed on a screen to give information to a player

**Author**: James Heslin (PROGRAM\_IX)

### 8.6.1 Methods

<b>__init__</b> ( <i>self</i> )
Constructs a new HUD
<b>Author</b> : James Heslin (PROGRAM_IX)

**add**(*self*, *hud\_el*)

Add a new element to the HUD

**Author:** James Heslin (PROGRAM\_IX)

**remove**(*self*, *hud\_el*)

Remove an element from the HUD

**Author:** James Heslin (PROGRAM\_IX)

**draw**(*self*, *screen*)

Renders all elements of the HUD to the screen

**Parameters**

**screen:** The screen onto which the HUD is to be rendered  
(*type=pygame.Surface*)

**Author:** James Heslin (PROGRAM\_IX)

**get**(*self*, *label*)

Returns a HUDElement with matching label from elements, otherwise returns None

**Parameters**

**label:** The label of the HUDElement to retrieve  
(*type=string*)

**Return Value**

The HUDElement with the specified label  
(*type=HUDElement or None*)

**Author:** James Heslin (PROGRAM\_IX)

## 9.2 Class *InputEngine*

Receives input events from an *EventEngine* and uses them to maintain an up- to-date keyboard/mouse state

**Author:** James Heslin (PROGRAM\_IX)

### 9.2.1 Methods

<b>__init__</b> ( <i>self</i> )
Constructs a new <i>InputEngine</i>
<b>Author:</b> James Heslin (PROGRAM_IX)

<b>mouse_motion</b> ( <i>self</i> , <i>event</i> )
Processes MOUSEMOTION events
<b>Parameters</b>
<i>event</i> : A MOUSEMOTION event ( <i>type=pygame.Event</i> )
<b>Author:</b> James Heslin (PROGRAM_IX)

<b>mouse_b_down</b> ( <i>self</i> , <i>event</i> )
Processes MOUSEBUTTONDOWN events
<b>Parameters</b>
<i>event</i> : A MOUSEBUTTONDOWN event ( <i>type=pygame.Event</i> )
<b>Author:</b> James Heslin (PROGRAM_IX)

**mouse\_b\_up**(*self*, *event*)

Processes MOUSEBUTTONUP events

**Parameters**

**event:** A MOUSEBUTTONUP event  
(*type=pygame.Event*)

**Author:** James Heslin (PROGRAM\_IX)**key\_down**(*self*, *event*)

Processes KEYDOWN events

**Parameters**

**event:** A KEYDOWN event  
(*type=pygame.Event*)

**Author:** James Heslin (PROGRAM\_IX)**key\_up**(*self*, *event*)

Processes KEYUP events

**Parameters**

**event:** A KEYUP event  
(*type=pygame.Event*)

**Author:** James Heslin (PROGRAM\_IX)**reset**(*self*)

Reset all the input values

**Author:** James Heslin (PROGRAM\_IX)**print\_all\_states**(*self*)

Print the states of all tracked inputs

**Author:** James Heslin (PROGRAM\_IX)

## 10 Module `pystroke.locals`

### 10.1 Variables

Name	Description
SWITCH_FLAG	<b>Value:</b> 0
QUIT_FLAG	<b>Value:</b> 1
CONTINUE_FLAG	<b>Value:</b> 2
__package__	<b>Value:</b> None

## 11 Module pystroke.vector2

### 11.1 Variables

Name	Description
<code>__package__</code>	<b>Value:</b> 'pystroke'

### 11.2 Class Vector2

A two-dimensional vector

**Author:** James Heslin (PROGRAM\_IX)

#### 11.2.1 Methods

<code>__init__(self, x=0.0, y=0.0)</code>
Constructs a new Vector2
<b>Parameters</b>
<b>x:</b> X (horizontal) co-ordinate of vector ( <i>type=double</i> )
<b>y:</b> Y (vertical) co-ordinate of vector ( <i>type=double</i> )
<b>Author:</b> James Heslin (PROGRAM_IX)

<code>__str__(self)</code>
Returns a string with the vector's co-ordinates
<b>Return Value</b>
A string containing the vector's co-ordinates ( <i>type=string</i> )
<b>Author:</b> James Heslin (PROGRAM_IX)

---

**from\_points**(*a*, *b*)

---

Returns a new Vector2 with the co-ordinates of the difference between the two points**Parameters**

**a:** The first point to use in constructing the new Vector2

(*type=tuple/list of two ints*)

**b:** The second point to use in constructing the new Vector2

(*type=tuple/list of two ints*)

**Return Value**

A new Vector2 constructed from the inputted points

(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

---

**get\_magnitude**(*self*)

---

Returns the magnitude of the vector**Return Value**

The magnitude of the vector

(*type=double*)

**Author:** James Heslin (PROGRAM\_IX)

---

**normalised**(*self*)

---

Returns a normalised copy of the vector**Return Value**

Normalised copy of the vector

(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

---

**dot\_product**(*self*, *other*)

---

Returns the dot product of the vector and the input vector**Parameters**

**other:** The vector to dot product against

(*type=Vector2*)

**Return Value**

The dot product of the vector and the input vector

(*type=double*)

**Author:** James Heslin (PROGRAM\_IX)

---

**cross\_product**(*self*, *other*)

---

Returns the cross product of the vector and the input vector**Parameters**

**other:** The vector to cross product against  
(*type=Vector2*)

**Return Value**

The cross product of the vector and the input vector  
(*type=double*)

**Author:** James Heslin (PROGRAM\_IX)

---

**clamp**(*x*, *a*, *b*)

---

'Clamp' the value of x between a and b, i.e., return x if it is between a and b, a if x is lower than a, and b if x is larger than b**Parameters**

**x:** The number to clamp  
(*type=double*)

**a:** The lower bound of x's clamp  
(*type=double*)

**b:** The upper bound of x's clamp  
(*type=double*)

**Return Value**

The clamped value of x  
(*type=double*)

**Author:** James Heslin (PROGRAM\_IX)

---

**get\_angle**(*self*)

---

Returns the angle this vector is pointing to**Return Value**

The angle this vector points to (in radians)  
(*type=double*)

**Author:** James Heslin (PROGRAM\_IX)

---

**\_\_add\_\_**(*self*, *other*)

---

Add the vector to other and return the result**Parameters**

**other:** The vector to add  
(*type=Vector2*)

**Return Value**

The result of the vector being added to other  
(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

---

**\_\_sub\_\_**(*self*, *other*)

---

Subtract other from the vector and return the result**Parameters**

**other:** The vector to subtract  
(*type=Vector2*)

**Return Value**

The result of other being subtracted from the vector  
(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

---

**\_\_neg\_\_**(*self*)

---

Negate the vector and return the result**Return Value**

The negated vector  
(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

---

**\_\_mul\_\_**(*self*, *sca*)

---

Multiply the vector by other and return the result**Parameters**

**sca:** The scalar to multiply by  
(*type=double*)

**Return Value**

The result of the vector being multiplied by sca  
(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

---

**div**\_\_\_\_(*self*, *sca*)

---

Divide the vector by *sca* and return the result**Parameters**

**sca:** The scalar to divide by  
(*type=double*)

**Return Value**

The result of the vector being divided by *sca*  
(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

## 12 Module *pystroke.vector2\_test*

### 12.1 Variables

Name	Description
<code>__package__</code>	<b>Value:</b> <code>'pystroke'</code>

### 12.2 Class *TestVector2*

#### 12.2.1 Methods

**setUp(*self*)**

Hook method for setting up the test fixture before exercising it.

Overrides: `unittest.case.TestCase.setUp` `exitit`(inherited documentation)

**test\_str(*self*)**

#### *Inherited from `unittest.case.TestCase`*

`__call__()`, `__eq__()`, `__hash__()`, `__init__()`, `__ne__()`, `__repr__()`, `__str__()`, `addCleanup()`, `addTypeEqualityFunc()`, `assertAlmostEqual()`, `assertAlmostEquals()`, `assertDictContainsSubset()`, `assertDictEqual()`, `assertEqual()`, `assertEquals()`, `assertFalse()`, `assertGreater()`, `assertGreaterEqual()`, `assertIn()`, `assertIs()`, `assertIsInstance()`, `assertIsNone()`, `assertIsNot()`, `assertIsNotNone()`, `assertItemsEqual()`, `assertLess()`, `assertLessEqual()`, `assertListEqual()`, `assertMultiLineEqual()`, `assertNotAlmostEqual()`, `assertNotAlmostEquals()`, `assertNotEqual()`, `assertNotEquals()`, `assertNotIn()`, `assertNotIsInstance()`, `assertNotRegexpMatches()`, `assertRaises()`, `assertRaisesRegexp()`, `assertRegexpMatches()`, `assertSequenceEqual()`, `assertSetEqual()`, `assertTrue()`, `assertTupleEqual()`, `assert_()`, `countTestCases()`, `debug()`, `defaultTestResult()`, `doCleanups()`, `fail()`, `failIf()`, `failIfAlmostEqual()`, `failIfEqual()`, `failUnless()`, `failUnlessAlmostEqual()`, `failUnlessEqual()`, `failUnlessRaises()`, `id()`, `run()`, `setUpClass()`, `shortDescription()`, `skipTest()`, `tearDown()`, `tearDownClass()`

#### *Inherited from `object`*

`__delattr__()`, `__format__()`, `__getattr__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__setattr__()`, `__sizeof__()`, `__subclasshook__()`

### 12.2.2 Properties

Name	Description
<i>Inherited from object</i> __class__	

### 12.2.3 Class Variables

Name	Description
<i>Inherited from unittest.case.TestCase</i> longMessage, maxDiff	

## 12.3 Class *TestMagnitude*

### 12.3.1 Methods

**setUp**(*self*)

Hook method for setting up the test fixture before exercising it.

Overrides: `unittest.case.TestCase.setUp` `exitit`(inherited documentation)

**test\_magnitude**(*self*)

*Inherited from unittest.case.TestCase*

## 13.2 Class Vex

Vector sprite class (consider renaming) - consists of a list of points which are rendered relative to an x and y at draw time

**Author:** James Heslin (PROGRAM\_IX)

### 13.2.1 Methods

<b>__str__</b> ( <i>self</i> )
Returns a string containing the x and y of the vector sprite
<b>Return Value</b>
A string containing the x and y of the vector sprite
( <i>type=string</i> )
<b>Author:</b> James Heslin (PROGRAM_IX)

---

**\_\_init\_\_**(*self*, *x*, *y*, *colour*, *points*, *width*, *scale\_x*=1, *scale\_y*=1)

---

Constructs a new Vex

**Parameters**

**x:** The X (horizontal) co-ordinate of the vector sprite  
(*type=int*)

**y:** The Y (vertical) co-ordinate of the vector sprite  
(*type=int*)

**colour:** The colour of the vector sprite  
(*type=pygame.Color*)

**points:** The points that make up the vector sprite  
(*type=list/tuple of tuples (int, int)*)

**width:** The width of the vector sprite's lines  
(*type=int*)

**scale\_x:** The horizontal multiplier of the vector sprite's size  
(*type=double*)

**scale\_y:** The vertical multiplier of the vector sprite's size  
(*type=double*)

**Author:** James Heslin (PROGRAM\_IX)

---

---

**dir\_vec**(*self*)

---

Return a copy of the vector sprite's direction vector (the first vector in its list of points), adjusted to have absolute co-ordinates

**Return Value**

A copy of the vector sprites's direction vector, with absolute co-ordinates  
(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

---

---

**rel\_dir**(*self*)

---

Returns a copy of the relative direction vector

**Return Value**

A copy of the relative direction vector  
(*type=Vector2*)

---

**draw**(*self*, *surface*)

Renders the vector sprite to the surface specified

**Parameters**

**surface:** The surface onto which the vector sprite is to be rendered  
(*type=pygame.Surface*)

**Author:** James Heslin (PROGRAM\_IX)

**update**(*self*, *surface*)

Updates the vector sprite with respect to the specified surface

**Parameters**

**surface:** The surface to update the vector sprite against  
(*type=pygame.Surface*)

**Author:** James Heslin (PROGRAM\_IX)

**distance\_to**(*self*, *p*)

Returns the distance between the centre of the vector sprite and the specified point

**Parameters**

**p:** The point to compare to the vector sprite  
(*type=Vector2*)

**Return Value**

The distance between the centre of the vector sprite and the specified point  
(*type=double*)

**Author:** James Heslin (PROGRAM\_IX)

**vector\_between**(*self*, *p*)

Returns the vector between the vector sprite and the specified point

**Parameters**

**p:** The point to compare to the vector sprite  
(*type=Vector2*)

**Return Value**

The vector between the vector sprite and the specified point  
(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

**angle\_to\_face\_point**(*self*, *p*)

Return the rotation angle (in radians) required for the vector sprite to face a specified point (face: the vector sprite's direction vector is pointing towards the point)

**Parameters**

**p:** The point to face  
(*type=Vector2*)

**Return Value**

The rotation angle (in radians) required for the vector sprite to face p  
(*type=double*)

**Author:** James Heslin (PROGRAM\_IX)

**rotate\_to\_face\_point**(*self*, *p*)

Rotate the vex to face a specified point

**Parameters**

**p:** The point to face  
(*type=Vector2*)

**Author:** James Heslin (PROGRAM\_IX)

**rotate\_by\_radians**(*self*, *a*)

Rotate the shape by a given number of radians

**Parameters**

**a:** The number of radians to rotate the vector sprite by  
(*type=double*)

**Author:** James Heslin (PROGRAM\_IX)

---

**move\_abs**(*self*, *x*, *y*, *surface*)
 

---

Move the vector sprite in the X/Y plane without leaving the bounds of the specified surface - performs vector calculation to make sure diagonal movement is not faster than cardinal

**Parameters**

- x:** The X (horizontal) movement amount  
(*type=double*)
- y:** The Y (vertical) movement amount  
(*type=double*)
- surface:** The surface to use to restrict the movement of the vector sprite  
(*type=pygame.Surface*)

**Author:** James Heslin (PROGRAM\_IX)

---

---

**move\_rel**(*self*, *x*, *y*, *surface*)
 

---

Move the vector sprite in the X/Y plane without leaving the bounds of the specified surface - assumes all inputs have already been calculated to restrict movement speed

**Parameters**

- x:** The X (horizontal) movement amount  
(*type=double*)
- y:** The Y (vertical) movement amount  
(*type=double*)
- surface:** The surface to use to restrict the movement of the vector sprite  
(*type=pygame.Surface*)

**Author:** James Heslin (PROGRAM\_IX)

---

---

**get\_relative\_points\_tuple**(*self*)
 

---

Returns a list of 2D points as tuples, relative to vector sprite position, respective of scale

**Return Value**

- A list of tuples representing the points in the vector sprite, with co-ordinates relative to the vector sprite's position, respective of scale  
(*type=list of tuples (int, int)*)

**Author:** James Heslin (PROGRAM\_IX)

---

**get\_absolute\_points\_tuple(self)**

Returns a list of 2D points as tuples, relative to origin, respective of scale

**Return Value**

A list of tuples representing the points in the vector sprite, with co-ordinates relative to the origin, respective of scale

*(type=list of tuples (int, int))*

**Author:** James Heslin (PROGRAM\_IX)

**get\_relative\_points\_vector2(self)**

Returns a list of Vector2 objects representing 2D points, relative to vector sprite position, respective of scale

**Return Value**

A list of Vector2 objects representing the points in the vector sprite, with co-ordinates relative to the vector sprite's position, respective of scale

*(type=list of Vector2 objects)*

**Author:** James Heslin (PROGRAM\_IX)

**get\_absolute\_points\_vector2(self)**

Returns a list of Vector2 objects representing 2D points, relative to origin, respective of scale

**Return Value**

A list of Vector2 objects representing the points in the vector sprite, with co-ordinates relative to the origin, respective of scale

*(type=list of Vector2 objects)*

**Author:** James Heslin (PROGRAM\_IX)

**point\_inside**(*self*, *v*)

Determines roughly if a given point is inside the vector sprite, can be used for crude collision detection

**Parameters**

**v**: The point to check  
*(type=Vector2)*

**Return Value**

True if the point is inside the vector sprite, False otherwise  
*(type=boolean)*

**Author:** James Heslin (PROGRAM\_IX)

**13.2.2 Class Variables**

Name	Description
radius	<b>Value:</b> 20
